Hi Michele,

Attached is the information from our Geologist regarding the injection zone.

Thanks,

Sonnie T. Pineda

Hi Sonnie,

Thanks for your call earlier. As we discussed, we are looking for an answer to this question from your experts as to whether there is test/data to support your statement and perhaps an explanation of what kind of information exists. Then we can discuss the need for you to provide the supporting information to EPA. Let's start with a description of what exists. Thanks.

Hi Sonnie,

To clarify, I am not asking for the documentation at this moment, I am asking if there is documentation including test data to back up the statement. It is inconsistent with a Class I permit to not be injecting below the lowermost USDW and I've inquired about this before.

Thanks!

Michele,

On this second question you sent, I forwarded this to our geologist. I am waiting for their response as well since you are asking for a documentation and test data to back up the initial response. It may take a awhile to get the information you requested.

Thanks Sonnie,

Yes, I heard the statement previously about presumed low injectivity, but is there documentation of that statement? Have you collected injectivity test data from these formations and demonstrated they are not going to be suitable – such as the San Joaquin or the Etchegoin or below (not sure what is below), the Monterey?

Michele,

From our geologist email below, *“there are no suitable injection zones below the Lower Tulare. The next deepest zone that could some injectivity is the Mya zone of the San Joaquin Formation, which produces gas”*

Thanks,

Sonnie:

I confirmed with Tony Reid that there are no suitable injection zones below the Lower Tulare. The next deepest zone that could some injectivity is the Mya zone of the San Joaquin Formation, which produces gas.

Hi Sonnie,

I do have one question and it would be helpful to have a response by Monday noon. We talked about this before but I would like a considered reply from your geologic experts. You would not need an aquifer exemption if the Class I wells were drilled and completed into a formation that did not meet the definition of a USDW. In fact Class I wells as you know are normally completed below the lowermost USDW. We are interested to understand why the wells are not going to be proposed to be in a formation other than the Tulare. We would appreciate your explanation.

Sincerely,

Michele

Importance: High

Michele,

As we discussed on our phone conversation last Tuesday April 28, 2015, attached is the electronic copy of Elk Hills Power Aquifer Exemption application for Class 1 UIC on Elk Hills Field sections 1B and 2B. The hard copy of this application will follow. Two hard copies will be sent to you, one hard copy to Lisa McWhirther and one hard copy to James Walker. I will provide the tracking number as soon as it is available.

Thank you,

Sonnie T. Pineda
